

NORTH BASIN COATING **XTRA SHIELD™** SYSTEM

DATA SHEET

The North Basin Coating **XTRA SHIELD™** system is a two coat process combining optimum corrosion protection with highest weatherability.* The basis for the excellent corrosion resistance is a zinc rich epoxy powder primer which is used as basecoat. This primer is used exclusively on sandblasted substrates (iron/steel). The topcoat is a polyester powder.

Topcoat: NB-1000 Polyester Powder Coating

NB-1001 Zinc Rich Primer

Sandblasted Substrate - Iron/Steel

* This two coat system gives an optimum non-porous film as well as excellent UV protection through the use of high quality polyester powder coatings.

Features:

- **Excellent Corrosion Protection**
- **Excellent Weather Resistance**
- Good Mechanical Properties
- Very Smooth Flow
- Excellent Coverage

Typical Applications:

Construction Industry
Fencing
Park Furniture
Lighting Fixtures
Handrails
Hinges
Pipeline Markers
Electrical Equipment
Panel Boards

Signs
Automotive Equipment
Agricultural Accessories
Mailboxes
Door Frames
Fire Hydrants
Piping-Gas Plants & Oilfield
Electric Panels
Small Vessels
